

Accessibility Audit

How accessible is your website?

<https://netz.ly/accessibility>

Why accessibility?

Using a website can be a major challenge for people with disabilities. For this reason, content should be prepared in such a way that it is accessible to all people. For example, people with visual impairments rely on screen readers. Here we check that the website **content is accessible to all in a logical and accessible order.**

Specifications for accessible sites

We are **guided by the web content accessibility guidelines (WCAG) and the requirements of the EU.** These guidelines aim to make web-based content accessible to people with disabilities, such as visual or hearing impairments. This does not result in any disadvantages for other users.

We comply with WCAG 2.0

The WCAG 2.0 guidelines are categorized into three levels of conformance to suit different groups and situations.

- A (lowest level)
- AA (medium level)
- AAA (highest level)

We recommend AA in most cases and also offer this in our audit.

Criteria for accessibility

The WCAG has defined a total of 61 success criteria for an accessible website, which serve as a basis for the practical implementation of accessibility. You can read more about this in the official sources. The four most important principles that we focus on in the audit are

- Perceptibility
- Usability
- Comprehensibility
- Robustness

Costs for the audit

The price of the audit depends on how complex the website and content are. Before we start the audit, we will prepare a non-binding offer for you.

What you will get

- An inventory of how accessible your website is
- Based on official standards
- Clear recommendations to reach the target level
