

Matrix instead of silo: Workshop on work organization with AI

We analyze the effects of AI and draw conclusions for work organization.

netz.ly/workorganization

Opportunities for the productivity of your company

What impact will AI have on entire companies and the organization of their work? The theory is that AI tools will soon be at least as good as humans in highly specialized fields such as programming or image creation. This means **that fewer specialists and more creative generalists will be in demand in the future.** However, many companies organize their work in groups of specialists, i.e. in traditional departments. Instead, we need **overarching teams that seek and find solutions to specific problems.**

What we are looking at specifically

In this workshop, we will take an in-depth look at the impact of AI on the world of work and how we can **proactively address these changes.** From defining AI to looking at existing working models and adapting them to the individual needs of our organizations, we will explore the future of work organization with AI and develop strategies to operate successfully and safely in this new era.

After the workshop, you will be able to assess the opportunities and risks of AI-based work and derive suitable measures for the optimal organization of work in your company. Concrete approaches and strategies will help you to align your working environment for the future.

Goals of the workshop

- Current classification and potential
- In-depth look at the impact of AI on the world of work
- Presentation and evaluation of alternative work organizations
- Concrete derivations for your company
- Action plan for implementation

Key data of the workshop

- In-house workshop
- Customized for your company
- Duration: all day 10-17 h
